

ID	Feature ID	Test Case	Test Data	Expected Result	Actual Result	Status	Comments
1	1	Check results on entering a valid username and password	username: Pandelis password: c	- user inputs username and password - Message 'Access granted' and continue in the program.	- User logged in	passed	
2	1	Check results on entering a invalid username and password	username: Michael password: a	- user inputs username and password - user receives an error message - user not logged in	- Error message is received - They were not logged in	passed	
3	1	Check results on entering a valid username but invalid password	username: Pandelis password: a	- user inputs username and password - user receives an error message - they are not logged in	- Error message is received - They were not logged in	passed	
4	1	Check results on entering neither a username or password	username: password:	- user presses enter twice to bypass username and password - they receive an error message - they are not logged in	- Error message is received - They were not logged in	passed	
1	4	Check results on entering correct option in table	V	- user views all the clients in the client data file	- user views all the clients in the client data file in a table in the terminal	passed	
2	4	Check results on entering incorrect option in table	N	- user receives an error message and is prompted for new input	- Error message is received - They were prompted for proper input	passed	
3	4	Check results on entering correct option in table	C	- user views all the clients in the client data file	- user views all the clients in the client data file	passed	
4	4	Check results on entering correct option in table	M	- user views all the clients in the client data file	- user views all the clients in the client data file	passed	
5	4	Check results on entering lowercase option in table	v, c,m, u, a	- user views all the clients in the client data file	- user views all the clients in the client data file	passed	
1	5	Check results on entering correct option in table for adding new client	A	- user views all the clients in the client data file	- user views all the clients in the client data file	passed	
2	5	User inputs correct data to add status	paid	- user is able to input data for next status	- user is able to input data for next status	passed	
3	5	User inputs incorrect data to add status	unpaid	- Error message is displayed, user is not able to input data for next status	- Error message is displayed, user is not able to input data for next status	passed	

4	5	User inputs incorrect data (non-integer) in quote field	four hundred	- Error message is displayed, user is not able to input data until integer is inputted	- Error message is displayed, user is not able to input data until integer is inputted	passed	
5	5	User inputs correct data (integer) in quote field	500	- Data is inputted and program continues	- Data is inputted and program continues	passed	
1	6	Check results on entering correct option in table for updating client details	U	- user views all the clients in the client data file	- user views all the clients in the client data file	passed	
2	6	User inputs correct data to update status	onboarded	- user is able to input data for next status	- user is able to input data for next status	passed	
3	6	User inputs incorrect data to update status	onboarding	- Error message is displayed, user is not able to input data for next status	- Error message is displayed, user is not able to input data for next status	passed	
4	6	User inputs incorrect data (non-integer) in quote field	four hundred	- Error message is displayed, user is not able to input data until integer is inputted	- Error message is displayed, user is not able to input data until integer is inputted	passed	
5	6	User inputs correct data (integer) in quote field	500	- Data is inputted and program continues	- Data is inputted and program continues	passed
